

Unrefined Shea butter

INCI : BUTYROSPERMUM PARKII BUTTER

Chinese INCI : 牛油果树 (BUTYROSPERMUM PARKII) 果脂

Organic and FFL certified by Ecocert
From West Africa

Shea butter

The shea butter that we offer comes from years of passion from our producer. It all started with an observation: why was the shea butter available on the market so different from the miracle product described in pharmacy and medical theses?

Where was this fabulous product with its nourishing, healing, protective and disinfecting power? All that was available was either white and inert fat, industrial shea butter, or a natural but rancid butter with an unbearable smell.

The shea butter we propose is the result of these years of research and development, notably in the comparison and analysis of different butters, establishing a relationship between sunshine and rainfall with the result obtained.

This unique know-how allows us to obtain a product of exceptional quality and freshness that retains all its beneficial properties.

From West Africa

In West Africa, the shea tree grows wild in the sub-Saharan savannah, without pesticides or excessive watering to force it to develop. This growth according to the rains and the diversity of the soils produces almonds of a great cosmetic and gustatory richness, they are called "the gold of women".

Each step of the process is based on ancestral know-how to achieve an astonishingly high quality result. The extraction protocol used means that there is no equivalent product on the market in terms of quality, authenticity and purity.

Each year, an audit conducted by Ecocert certifies the butter as Organic and Fair Trade (FFL - Fair For Life).

The shea butter has not undergone any refining operation, which preserves its intrinsic qualities.

The process

The almonds are washed, dried and then sorted to eliminate any almonds that show signs of oxidation or are less than perfect.

The almonds are then roasted in small batches to be ground and processed to extract the butter. The method used is manual and gentle. It is done at low temperature (<90°C). The butter is then filtered and put in 2 kg bags.

This method guarantees the best possible quality, but takes three times longer and gives a yield of 25 to 35% less depending on the harvest.

The natural properties of our shea butter in your cosmetics

- hydrating
- healing
- anti-inflammatory
- antiseptic
- hemostatic
- restructuring

Our shared values

We respect nature, people and their work.

We do our utmost to ensure that "Excellence" is not just a word, but that excellence is reflected in every product we produce.

We transmit our values and know-how to future generations. We maintain the balance between ancestral know-how and modern methods.

The mission

We promote the autonomy of Beninese rural communities with the development of a range of care products.

The commitments

- Create value
- 0 pesticides - 0 fertilizers - 0 herbicides on the land
- Reduce the carbon footprint (by using maritime transport for example)
- Reduce plastic consumption (by using refills for example)
- Offer 0.5% of the production to poor women

AMHARISERA

The concept

AMHARISERA offers conventional or organic and/or Fair Trade certified natural ingredients to the cosmetics, perfumery and pharmaceutical industries.

After 20 years of experience in various industries in France and abroad, Alexandra Legai has developed a taste for naturalness. I decided to focus my expertise on how to serve natural ingredients producers in the world.

All the natural ingredients I offer are carefully selected in a spirit of human and environmental respect. As an exclusive agent, I consider essential to work in complete confidence. I am committed to **total transparency and traceability** by offering you the possibility of **direct contact with producers** on site.

AMHARISERA refers to the Amharas, traditionally sedentary farmers living in Ethiopia. They formed the heart of imperial Ethiopia. The elites of this ethnic group were for a long time those who ruled the country. They live in the rich mountainous regions of the Ethiopian highlands of the Horn of Africa.
